

# Template for TBSI pre using Marp

**Presenter:** Your Name

**Date:** xxxx.xx.xx

# Background - 1

```
![bg left]()  
![bg right]()
```

## Background - 2

Filters are easily reachable in Marp.

```
![blur:10px]()  
![brightness:1.5]()  
![contrast:200%]()  
![drop-shadow:0,5px,10px,rgba(0,0,0,.4)]()  
![grayscale:1]()  
![hue-rotate:180deg]()  
![invert:100%]()  
![opacity:.5]()  
![saturate:2.0]()  
![sepia:1.0]()
```

# Font

- the color of the text can be changed: `texttext` `texttext` `texttext`
- the size of font can be modified as well: `text`, `text`, `text`, `text`, `text`

# Images - 1

Single image

figure 1: the curse of dimensionality

# Image - 2

Image matrix

# Formula

Inline formula can be realized by `$$`, like  $y = x + 1$ , while letters like these can also be shown in slides:  $\mathcal{X}$ ,  $\mathcal{G}$ ,  $R$ ,  $\mathbb{C}$ .

Formula between lines:

$$y = x + 1$$

If we want a formula with process, it's a good idea to align the `=` to make it look nice, like:

$$\begin{aligned} y &= x + 1 \\ &= 3 \end{aligned}$$

# Footer

footer only works on this slide: `<!-- _footer: Citation &nbsp;|&nbsp; Name &nbsp;|  
&nbsp;institution &nbsp;|&nbsp; Date-->`

footer works from this slide: `<!-- footer: Citation &nbsp;|&nbsp; Name &nbsp;|  
&nbsp;institution &nbsp;|&nbsp; Date-->`

# Code

```
year = int(raw_input('year:\n'))
month = int(raw_input('month:\n'))
day = int(raw_input('day:\n'))

months = (0, 31, 59, 90, 120, 151, 181, 212, 243, 273, 304, 334)
if 0 <= month <= 12:
    sum = months[month - 1]
else:
    print 'data error'
sum += day
leap = 0
if (year % 400 == 0) or ((year % 4 == 0) and (year % 100 != 0)):
    leap = 1
if (leap == 1) and (month > 2):
    sum += 1
print 'it is the %dth day.' % sum
```

# List

## bullet list

- One
- Two
- Three

## ordered list

1. One
2. Two
3. Three

# Table

A common table:

	1	2	4	5	6	7	8
1	2	7	sdf	123	2	7	3
2	4	5daf	9	2	4	5dfs	6

Table 1: example

If we want to set the format of the table with more complexity, we should use `html` as tools.
